

WE ARE A VOLUNTEER FOUNDATION.

The ESA Foundation is dedicated to the promotion of continuing education and to altruistic activities that make a positive difference in the world community.

Career Enhancement Grants:

Individual Grants: Applications reviewed quarterly

Develop skills for career advancement; or training programs to update or maintain employment credentials; or attend educational training sessions to advance professional skills.

Vocational Training Grants:

Individual Grants: Applications reviewed every six months

Completing requirements for obtaining trade apprenticeships or certification; or obtaining necessary equipment for completing training programs/apprenticeships; or promoting programs and skills for training in the fine arts.

Partnership/Joint Venture Grants:

Partnership Grants: Approved for one or more years

To support other non-profits who provide educational career training programs that meet the ideals and goals of the ESA Foundation; or to support larger grant-making entities who are able to support multiple clients for a single program that furthers the educational interests of the ESA Foundation.

St. Jude Graduate School Grant:

Institution Grant: approved for 5 years

Annual contribution to develop excellent researchers to continue the fight against childhood catastrophic illness.

The St. Jude Graduate School of Biomedical Sciences

The mission of the St. Jude Graduate School of Biomedical Sciences is to educate and to train future generations of scientists seeking to understand the molecular basis of human disease and develop novel therapies based on that understanding.

The St. Jude Graduate School of Biomedical Sciences is designed to maximize student potential through self-directed learning, with guidance by world-renowned researchers and clinicians. Instruction is given in a dynamic environment that annually provides education and training to more than 200 affiliated undergraduate and graduate students, 300 postdoctoral fellows, 170 medical students, and 45 clinical fellows. Collaborative and translational research enables students to choose individualized paths to success and leadership in scientific discovery. These opportunities also raise awareness of the value and urgent need to develop young scientists who will discover cures and advance treatments for catastrophic childhood diseases.
